

Saya sudah buat model dengan nama 'Users' dan menggantikan atribut 'id' dengan 'email' sebagai primary key nya

```
migrations > 20230523071724-create-user.js <unknown> > up > nama
1 "use strict";
2 /** @type {import('sequelize-cli').Migration} */
3 module.exports = {
4   async up(queryInterface, Sequelize) {
5     await queryInterface.createTable("Users", {
6       email: {
7         allowNull: false,
8         autoIncrement: false,
9         primaryKey: true,
10        type: Sequelize.STRING,
11      },
12      nama: {
13        type: Sequelize.STRING,
14      },
15      password: {
16        type: Sequelize.STRING,
17      },
18    });
19  },
20  async down(queryInterface, Sequelize) {
21    await queryInterface.dropTable("Users");
22  },
23 };
24
```

Ini untuk tampilan di phpMyAdminnya setelah di 'npx sequelize-cli db:migrate'

The screenshot shows the phpMyAdmin interface with the 'users' table selected. The table structure is as follows:

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
1	email	varchar(255)	utf8mb4_general_ci		No	None			Change Drop More
2	nama	varchar(255)	utf8mb4_general_ci		Yes	NULL			Change Drop More
3	password	varchar(255)	utf8mb4_general_ci		Yes	NULL			Change Drop More

The 'email' column is highlighted as the primary key. Below the table structure, there are options to add, remove, or create indexes. The 'Indexes' section shows a primary index on the 'email' column.

Ketika saya ingin melakukan pengetesan kenapa sequelize tetep meminta 'id' padahal sudah saya ganti primary key nya dengan 'email', apakah atribut 'id' dalam sequelize tidak dapat dihilangkan?

The screenshot shows a REST client interface with the following details:

- URL:** `http://localhost:3030/register`
- Method:** `POST`
- Body (Request):**

```
{  "nama": "dani",  "email": "dani@gmail.com",  "password": "123",  "confPassword": "123"}
```
- Status:** `500 Internal Server Error` (122 ms, 1015 B)
- Body (Response):**

```
{  "name": "SequelizeDatabaseError",  "parent": {    "code": "ER_BAD_FIELD_ERROR",    "errno": 1054,    "sqlState": "42S22",    "sqlMessage": "Unknown column 'id' in 'field list'",    "sql": "INSERT INTO `Users` (`id`,`nama`,`password`) VALUES (DEFAULT,?,?);",    "parameters": [      "dani",    ]  }}
```
